VINAY CHOUHAN

Java Full-Stack Developer | Spring Boot · WebFlux · Vue · Angular · React

Email: vinay77100@gmail.com | **Phone:** +91 8962277229 | **Location:** Indore, MP | **LinkedIn:** linkedin.com/in/vinaychouhan275
GitHub: github.com/vinay27590 | **HackerRank:** hackerrank.com/vinayChouhan | **Portfolio:** vinay27590.github.io

Profile Summary

Java Full-Stack Developer with 6+ years in IT, including 4+ years designing and delivering secure, scalable web applications. Strong in **Spring Boot**, **Spring WebFlux** (reactive), **Spring Security (JWT)**, **PostgreSQL** and REST API design, with experience in microservice and modular architectures, multi-tenant systems and AI-powered solutions (**Spring AI** with Google Gemini, RAG). Skilled at building responsive front ends with **Angular**, **React.js** and **Vue.js**, and at working in Agile/Scrum teams with **JUnit 5** and **Mockito** testing. Currently building LaundryOS (multi-tenant laundry platform) and FlexPulse (AI fitness platform) end to end, from backend to Android/iOS apps.

Projects

LaundryOS: Multi-Tenant Laundry Service Platform **Personal project · In progress, 2026**

Marketing website, admin panel, customer Android app and field-agent Android app (Indore)

Tech: Java 21, Spring Boot 3.5 (Modulith, Security, JPA/Hibernate, Flyway), PostgreSQL 16, Vue 3, TypeScript, Quasar, Astro, Capacitor (Android), Firebase Auth, Razorpay, Google Maps, Google Cloud (Cloud Run, Cloud SQL, Cloud Storage), Cloudflare Pages, Docker, GitHub Actions

- Architected a modular monolith serving four clients (marketing site, admin panel, customer app, field-agent app) with PostgreSQL row-level security for database-enforced tenant isolation and role-based access.
- **Customer app:** Pincode serviceability check, map-based address, pickup slots, OTP sign-in, weight-based price estimate, Razorpay UPI/online payments, live order timeline with photos and invoice download.
- **Agent app:** Pincode-based pickup and delivery assignment, bag-tag scanning with weight and photos, OTP-confirmed delivery, cash/UPI collection, route planning with live location, and offline mode with auto-sync.
- **Admin panel:** Order board from booking to delivery, price lists, GST invoicing, automatic agent assignment, plant-station workflow (intake, quality check, packing), vendor outsourcing and revenue/collections dashboards.
- Built for reliability with idempotent APIs, state machines for orders and deliveries, integer-based money handling and **1,200+ automated backend tests**.

FlexPulse: AI-Powered Fitness & Workout Platform **Personal project · In progress, 2026**

Marketing website, admin panel, cross-platform athlete app (Android/iOS) and AI coach

Tech: Java 21, Spring Boot 3.2 (Modulith, Security, JPA/Hibernate, Flyway), Spring AI (Google Gemini, RAG vector store), PostgreSQL, Vue 3, TypeScript, Quasar, Pinia, Astro 4, Tailwind CSS, Capacitor (Android/iOS), Google OAuth, JWT, Resend API, Cloudflare Pages, Docker, GitHub Actions

- Architected a domain-driven modular monolith (Spring Modulith boundary enforcement, strict internal encapsulation, role-based access control) serving three frontends: SEO marketing website, admin panel and athlete mobile/web app.
- **Athlete app:** Offline-first catalog of **1,324 exercises** with search and filters; one-tap equipment swap algorithm (**sub-50 ms**); SVG muscle-recovery heatmap; live workout logger with sets/reps/RPE and rest timer; 5-step resumable onboarding; personalized 7-day planner with gym and home variants.
- **AI coach:** Workout routine generation with Spring AI and Google Gemini, checked by CSCS-based validation advisors; RAG vector search over exercise mechanics; deterministic fallback splits (Push/Pull/Legs, Upper/Lower, Full Body); automated BMI and sedentary-risk calculation.
- **Admin panel:** User directory with paginated search and active/suspended toggles, role management (user/admin), workout-completion analytics, system statistics dashboards and manual user provisioning.
- **Marketing website:** Edge-rendered programmatic SEO site with **1,324 exercise guide pages in 10 languages**, animated GIF demos, JSON-LD structured data and pre-launch waitlist email capture via Resend API.
- Built for reliability with defensive null checks, domain-specific exception mapping, zero cyclic dependencies verified by ArchUnit and **111 automated tests** (unit, @WebMvcTest, @DataJpaTest, live LLM integration), all passing.

Content Distribution System (CDS) **Mihaan · Jun 2024 – Jan 2026**

Multi-tenant, subscription-based global trade data distribution platform

- Led a team of **3 developers** to design and build the platform, architecting a standalone server application that centralizes global trade data (RPL, HS, ECCN) and serves client systems through a secure pull-based API.
- **Automated data syndication:** Built an event-driven pipeline that processes new data uploads, generates tenant-specific JSON files based on subscriptions and publishes them to an S3 bucket, cutting manual release effort from **2 hours to under 5 minutes** (**100% automation**).
- **Data standardization:** Added preprocessing and normalization flows that cut manual file cleanup effort by **60%** and ensured consistent ingestion across all content formats.
- **Query optimization:** Improved API performance by **40%** by tuning SQL and restructuring batch operations; consolidated multiple database calls into single queries, **reducing latency by 70%** for large file ingestion.

Global Trade Management (GTM) System **Mihaan · Jun 2024 – Jan 2026**

Tech: Java (Spring Boot, WebFlux), Angular 12, PostgreSQL, iText

- **Reactive APIs:** Built and optimized reactive CRUD APIs with Spring WebFlux, improving API response time by **30%**, reducing redundant DB calls by **25%** and speeding up front-end integration by **40%**.
- **Multi-tenant notification engine:** Built an event-driven email system where tenants create custom templates for application triggers, using a pub/sub pattern with a cron-based dispatcher and tenant-specific SMTP settings to fully automate the notification lifecycle.
- **Modular document engine:** Designed a flexible PDF generation framework using the Template Method and Strategy patterns with a core abstract base class, reducing code duplication by **60%** and accelerating new document templates while keeping branding and data consistent.

Client Application Development **Direction Software · Dec 2021 – Mar 2024**

- **Backend:** Engineered and maintained secure, scalable REST APIs with Java and Spring Boot, improving data processing efficiency by **25%**; designed normalized schemas and tuned SQL, speeding up data retrieval by **40%**.
- **Frontend:** Built responsive single-page applications with Angular, Vue.js and React.js, reducing page load times by **30%**.
- **Audit Management System** (Java, Angular 12, PostgreSQL): CSR audit workflow, server-side filtering for large datasets, custom event calendar used by 500+ users.
- **Human Resource Management System** (Java/Jmix, Vue.js/Quasar, PostgreSQL): attendance tracking, HR configuration modules, automated email and in-app notifications.
- **Woldo Analytics** (Java/Jmix, Astro, Vue.js, PostgreSQL): CMS-driven analytics dashboard, Stripe payments, customizable reporting views.
- **License Agreement System** (Java/Jmix, React/Next.js, PostgreSQL): migrated the front end from AngularJS to Next.js; licensing, agreement and contract workflows.

Experience

Mihaan Information Technology Services Private Limited, Indore, MP (Remote) **Jun 2024 – Jan 2026**

Software Engineer

Direction Software LLP, Indore, MP (Remote) **Dec 2021 – Mar 2024**

Associate Software Engineer

Rockfort Technosys India Pvt. Ltd., Indore, MP **May 2019 – Sep 2021**

Technical Support Executive

Technical Skills

- **Languages:** Java, JavaScript/TypeScript, Go
- **Backend:** Spring Boot, Spring WebFlux, Spring Security (JWT), Spring Data JPA/Hibernate, Spring Modulith, Spring AI (Google Gemini, RAG), Flyway, Jmix, Gin, NestJS
- **Frontend & Mobile:** Angular 12, Vue.js (Quasar, Nuxt.js), React.js (Next.js), Astro, Pinia, Tailwind CSS, Android/iOS via Capacitor
- **Database:** PostgreSQL (row-level security), MySQL, MongoDB
- **Testing:** JUnit 5, Mockito, @WebMvcTest, @DataJpaTest, ArchUnit, integration tests
- **DevOps & Cloud:** AWS (S3), Google Cloud (Cloud Run, Cloud SQL, Cloud Storage), Cloudflare Pages, Docker, Git, GitHub Actions (CI/CD), Bitbucket
- **Integrations & Tools:** Razorpay, Stripe, Firebase Auth, Google OAuth, Resend, Google Maps, IntelliJ IDEA, VS Code, pgAdmin, Postman, Sourcetree

Education

- **Bachelor of Engineering (Information Technology), not completed:** Shri Vaishnav Institute of Technology and Science, Indore
- **Higher Secondary (PCM):** Talent Higher Secondary School, Indore

Certifications

- **Oracle:** Oracle Java Explorer
